

REMOVAL OF ODORS IN THE HOME

WITH ENVIRONMENTALLY FRIENDLY AND CHEMICAL-FREE TECHNOLOGY

Written by: Kuno Bonne

Odor Removal

There are several good and effective methods that can be used when wanting to remove odors in the home. In this article, we test and describe the various methods, whether it's dealing with basement odor (mold), sewage odor, smoke odor, odor from sports gear, odor from smelly shoes, and similar odor issues.

“And after testing the product for a week, we can immediately say that it works well,” stated the renowned handyman, Kuno Bonne, from HANDYMAN.dk.

REMOVAL OF BASEMENT ODOR

A stubborn odor that can slowly take over the entire home is the basement odor, or the smell of mold, which typically occurs in basements of old houses where the moisture barrier was not effectively installed or has deteriorated over the years.

Moisture from the ground slowly seeps through damp masonry or concrete foundations, creating the smell that most people simply refer to as “the smell of the basement.”

The odor easily permeates furniture and textiles, causing individuals to unknowingly carry the scent of a “musty basement” when they leave home, as they may become accustomed to the smell to some extent.

“JIMCO’S MAC500S HAS ELIMINATED THE ODOR IN THE BASEMENT.”

You can get more information about the MAC-500 and check prices, for example, on JIMCO.dk. The important thing is to place the air purifier high in the room, such as on a ladder (see top picture) or on the top shelf of a cabinet.

ODOR IN THE BASEMENT

The lasting solution to this problem is indeed a basement renovation, where, for example, perimeter drainage is installed, and the foundation walls are excavated and sealed with foundation panels.

In some cases, it is also possible to treat moisture from the inside, although with a less effective degree of effectiveness, or reduce the moisture in the basement walls by installing an osmosis system.

However, if one doesn't have the means for the aforementioned solutions, there is a faster and cheaper solution to the problem.

WE HAVE ACTUALLY TESTED THE MAC500.

It is said to be able to eliminate this and other types of odors, and after testing the product for a week, we can immediately say that it works fine.

The MAC500 machine works by having a fan draw air past a built-in UV-C lamp. The UV-C light reacts with the natural ozone already present in the air, creating ozone. Ozone will naturally degrade over time depending on the amount of material to be oxidized (cleaned) and the amount of UV-C light present.

At the bottom of the MAC500, there are holes for horizontal or vertical mounting on walls. The duration of operation depends on the size of the room and whether the source of the odor has been removed, but after 5 hours, we could no longer detect the musty odor in this test basement, which was approximately 25 sqm

ODOR REMOVAL IN THE CAR, BOAT, OR SUMMER HOUSE

When it comes to removing odors from the car, boat, or summer house, we must also say that the MAC500 odor remover is highly effective. In these slightly smaller spaces, effective air purification can be achieved in just a few hours. In our tests, regardless of where we used the odor remover, we could no longer detect the original odor. Instead, we could smell a slight fresh scent, perhaps resembling the smell "after a rainfall, fresh and pleasant" - which is much easier to accept..

TESTED AND WRITTEN REFERENCE BY HANDYMAN.DK

Kuno Bonne has a background as a consultant and craftsman, specializing in carpentry and kitchen/bathroom projects. He has designed over 3,000 kitchen/bathroom total projects and has run his own construction company since 2001.

He has authored several DIY books published by Politikens Forlag, produced numerous YouTube DIY tutorials, including those for jem&fix, and has been involved in a multitude of TV broadcasts on DR1 and TV2, both as a host and as an expert in the field for DR1.
